

February 2015

[Throughout history, economic growth has been fueled by two factors: the expanding pool of workers and their rising productivity. From the perspective of rising prosperity, however, it is productivity that makes all the difference.]

Mckinsey & Company
Mckinsey Quarterly, September 2014

You Are What You Make

A look at the recently released GDP numbers for U.S. metros.

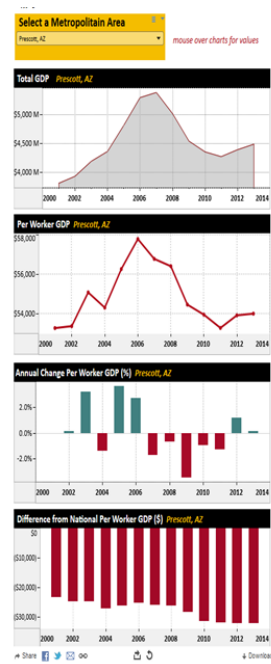

If you're serious about understanding the underlying economic capacity and direction of your community, then you have to pay attention to Gross Domestic Product (GDP). GDP is one of the most comprehensive measures of economic activity. It is the value of all goods and services produced in an area.

In September 2014 the U.S. Bureau of Economic Analysis (BEA) released GDP figures for all 381 metro areas in the nation. The data reveals the unique economic performances, and 2001 to 2013 trends for each metro.

SYNEVA Economics further calculated *Real GDP per Worker*¹ for each metro. Real GDP per Worker can be used as a practical proxy for labor productivity. The measure provides a unique means to gauge local labor productivity and the efficiency of capital utilization by firms in a metro area.

The spread in values of Real GDP per Worker among metros is telling and hints at the significant differences in the value of what is being produced and the contribution of labor. *Midland, TX* has the highest Real GDP per Worker in 2013 at \$152,778, which is \$66,589 above the nationwide figure of \$86,189. The *Brownsville-Harlingen, TX metro* has the lowest Real GDP per Worker in the nation at \$43,441.

View an [online interactive dashboard](#) with GDP trends for each metro at www.syneva.com

¹ *Real GDP worker* is total GDP for a metro, inflation-adjusted and expressed in 2009 dollars, and divided by the metro's total employment; using the BEA's employment estimate, which includes full-time and part-time employees, plus sole proprietors.

Why is this important?

Examining your community's Total GDP and GDP per Worker numbers is critical to gaining a deeper understanding of what underlies your economy's strengths and weaknesses. Knowing your unique mix of industries and the values of what they produce can go a long way to explaining differences in community wealth and prosperity.

Leadership in metros with high or fast-growing GDP numbers would be wise to incorporate the results in recruiting or promotional efforts; remembering the link to labor productivity. Likewise those in metros with low or declining GDP numbers should use the numbers to dig deeper to understand the specific causes of their weaknesses.

Change in Rankings

Observing local trends and differences against all of the nation's metro areas is simple way to gauge if your economy is gaining ground or falling behind. Following is a list of all metros and their five-year ranking changes for Total GDP and Real GDP per Worker. Below we've also pulled out the top ten ranking movers; both climbers and plungers.

To see individual metro values for the last five years check out the interactive dashboard at <http://www.syneva.com>

10 Metros that Skyrocketed both rankings jumped up by more than 20 places in the last five years
